

# Con-Test Takes Another Step To A Greener And Sustainable Earth!

**Coming in August**

## Methanol Vials for VOC Sample Update

*Con-Test Analytical Laboratory is 100% focused on the improvement of the environment and our contribution to a greener, sustainable earth.*

Con-Test is taking another step in being an industry leader in being environmentally conscious. Starting August 3, 2015, we will be changing our 15ml Methanol vials to 5ml vials for VOC 8260 soil samples.

### How Does This Help The Environment?

- Reduces methanol waste by 67%
- Reduces solid/soil waste by 67%
- Reduces weight of sample for shipping which reduces fuel consumption

### Sampling Will Become Faster and Easier for Clients...

- Saves time on-site for sampling
- Saves time as only one Terra core plug/or 5g syringe of soil needed for 5ml of methanol compared to 3 plugs or 15g/soil
- Uniformity in 5035 kits, all vials now get 1 soil plug, methanol and sodium bisulfate, d.i. water vial-one plug of soil each

#### ENVIRONMENTALLY CONSCIOUS

Con-Test Analytical Laboratory is an industry leader on the forefront of Sustainability/Green programs to reduce the carbon footprint. Multi-faceted programs include automation, energy efficiency, paper reduction, and solvent recovery systems. We are 100% focused on the improvement of the environment and our contribution to a greener, sustainable earth through a comprehensive program of energy audits, LEED-Green Building Testing, and the reduction of waste and natural resource use.
